

ZAGGRO

DECK

About

Our goal is to bring a multi-chain fragmented Liquidity aggregator with the support of institutional partners and an easy to use UI for anyone to interact with.

Our mission is to drive DeFi participation on SUI Blockchain to the next level by offering secure, intelligent and optimized trading solutions for individuals and institutional traders to tap effortlessly into the fragmented liquidity pools.

The Zaggro core team has proven experience developing liquidity aggregators as contractors. Both founders have delivered a liquidity aggregator for CEXs in 2018 while P2P Solutions Ltd. team recently delivered an EVM compatible indirect pair liquidity aggregator for Acta Finance.

Zaggro - Institutional Liquidity Aggregator

ZaggroSwap

Is a Liquidity Aggregator with indirect pair routing to offer the most optimal output for the users.

ZaggroSwap pool

Is an on-chain Request for Quotes model.
We aggregate real-time quotes from KYC validated and trusted market makers, offering prices to all of our users.

ZaggroDAO

Votes proposals and handle ongoing operations by managing the use of the linear vested Treasury.

Zaggro Audience

Users

Benefit from fragmented liquidity pools to receive best possible outcome

Brokers / Bots

Optimized execution cost and minimized slippage by integrating with ZaggroSwap.

Market Makers

Participate in our exclusive ZaggroSwap Pool to bid for the order flow.

DEXs

ZaggroSwap aggregates liquidity pools of DEXs and offer them volume.

 MniFinance

The Zaggro Protocol

Aggregator

ZaggroSwap aggregates DEXs and other DeFi services.

Robust API

Public Library for smooth integration in dApps and wallets. Corporate clients have access to a dedicated API key.

Secured and Audited

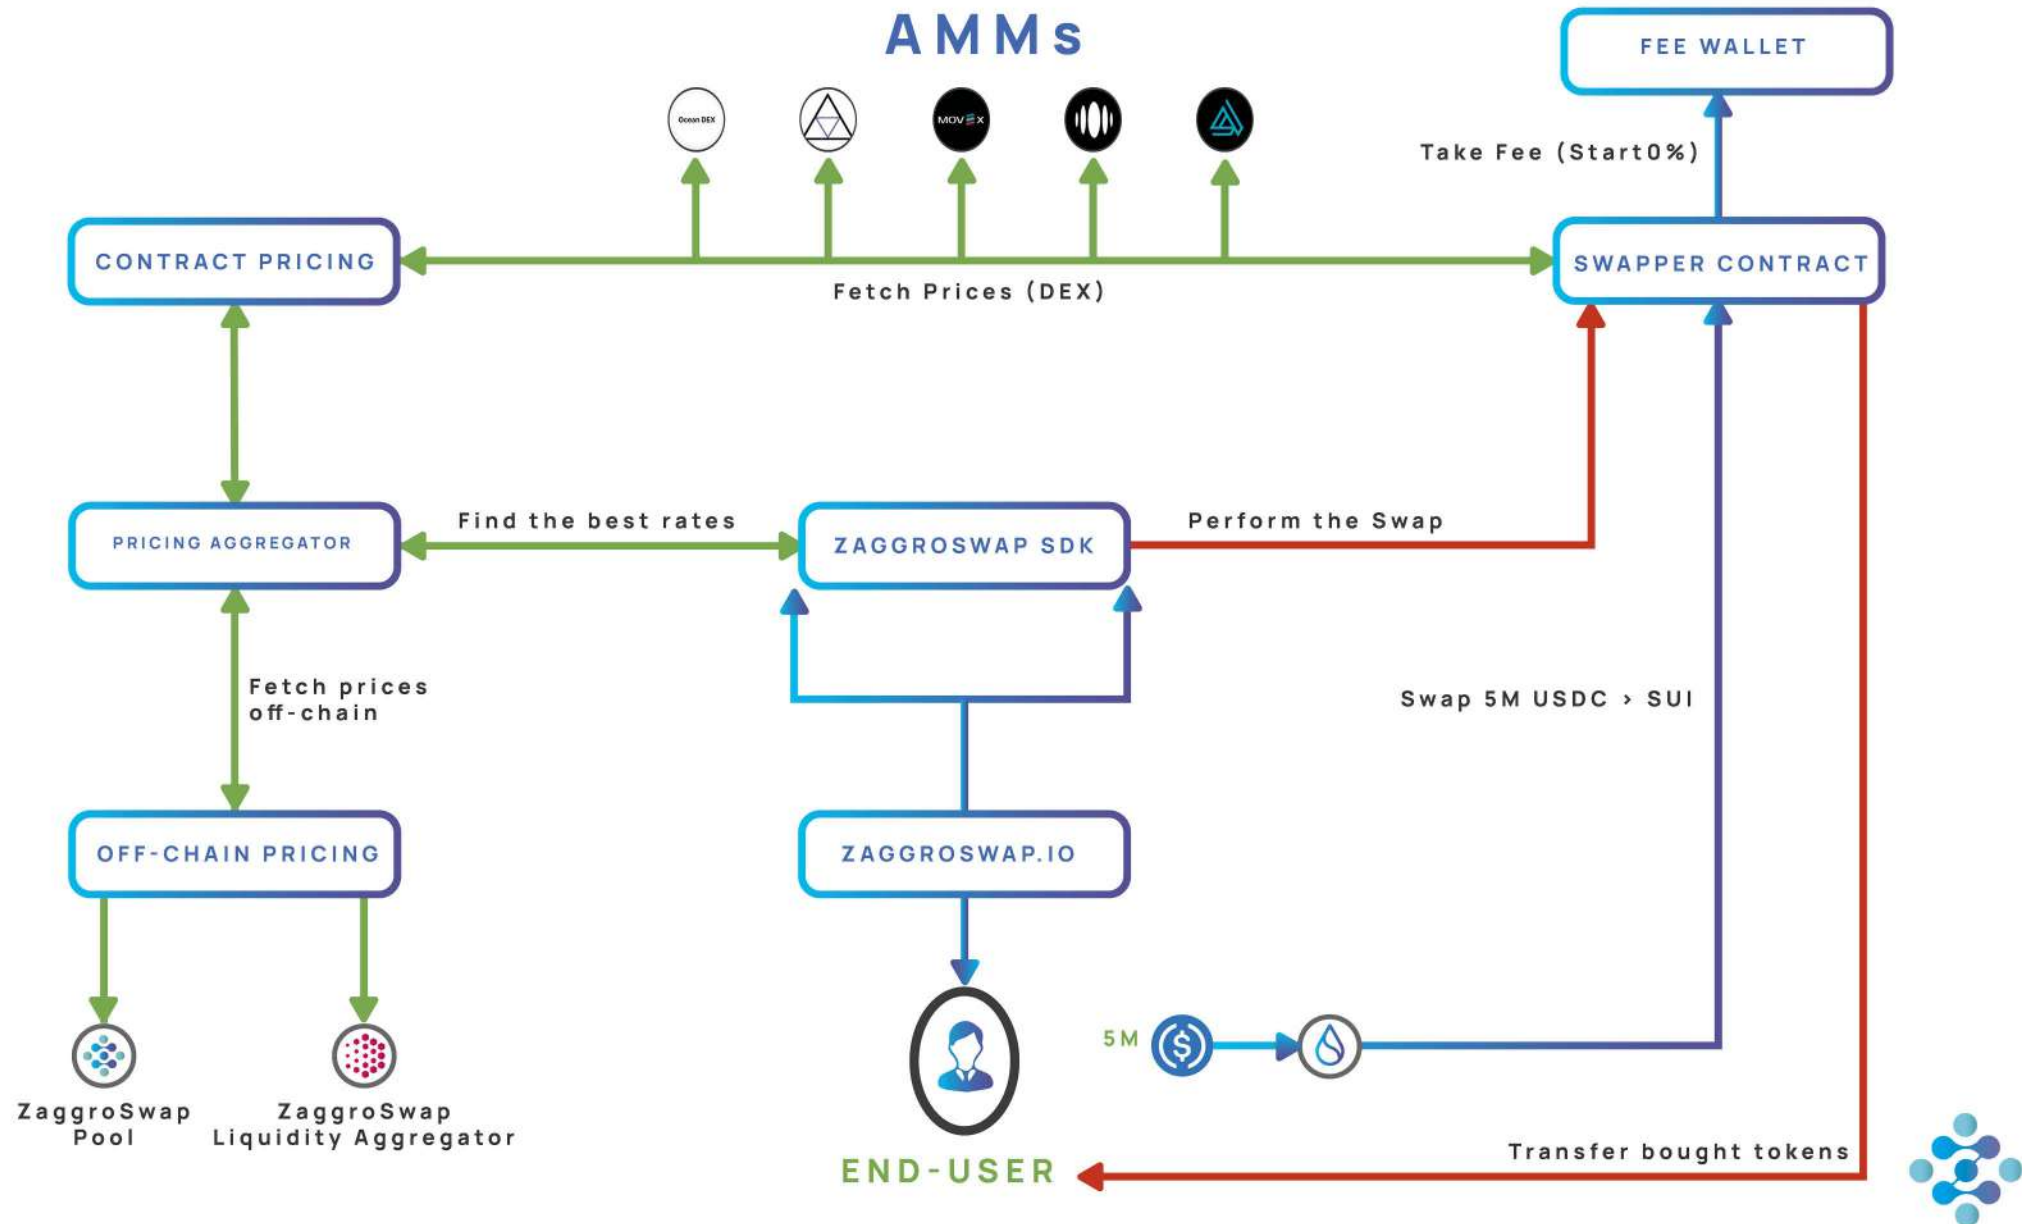

Smart contract external and independent audits to improve security and safety of users' assets.

Multichain

We build the Zaggro protocol on multiple networks. EVM network integrations will follow shortly after launch on SUI main net.

ZaggroSwap - Technical Drawing

ZaggroSwap potential integrations

Custodians

Easily integrated swapping token functions

Ethoswallet

Sui Wallet / Suiet

Lenders

Add exchange functions to your lending capabilities.

NFT Marketplace

Add exchange functions to your marketplace

Revenue Model

Arbitrage

While the AMM protocol automatically calculates the best possible route, it also reveals profitable arbitrage opportunities when users trade on an integrated DEX.

Aggregator Fee (0% at start)

ZaggroSwap Liquidity Aggregator reserves the right to set an Aggregator Fee in the future if required and confirmed by the DAO.

15% ZaggroSwap Pool fee

ZaggroSwap Pool is a private liquidity pool with multiple possible liquidity fees, of which 15% will go to the protocol for future development funds.

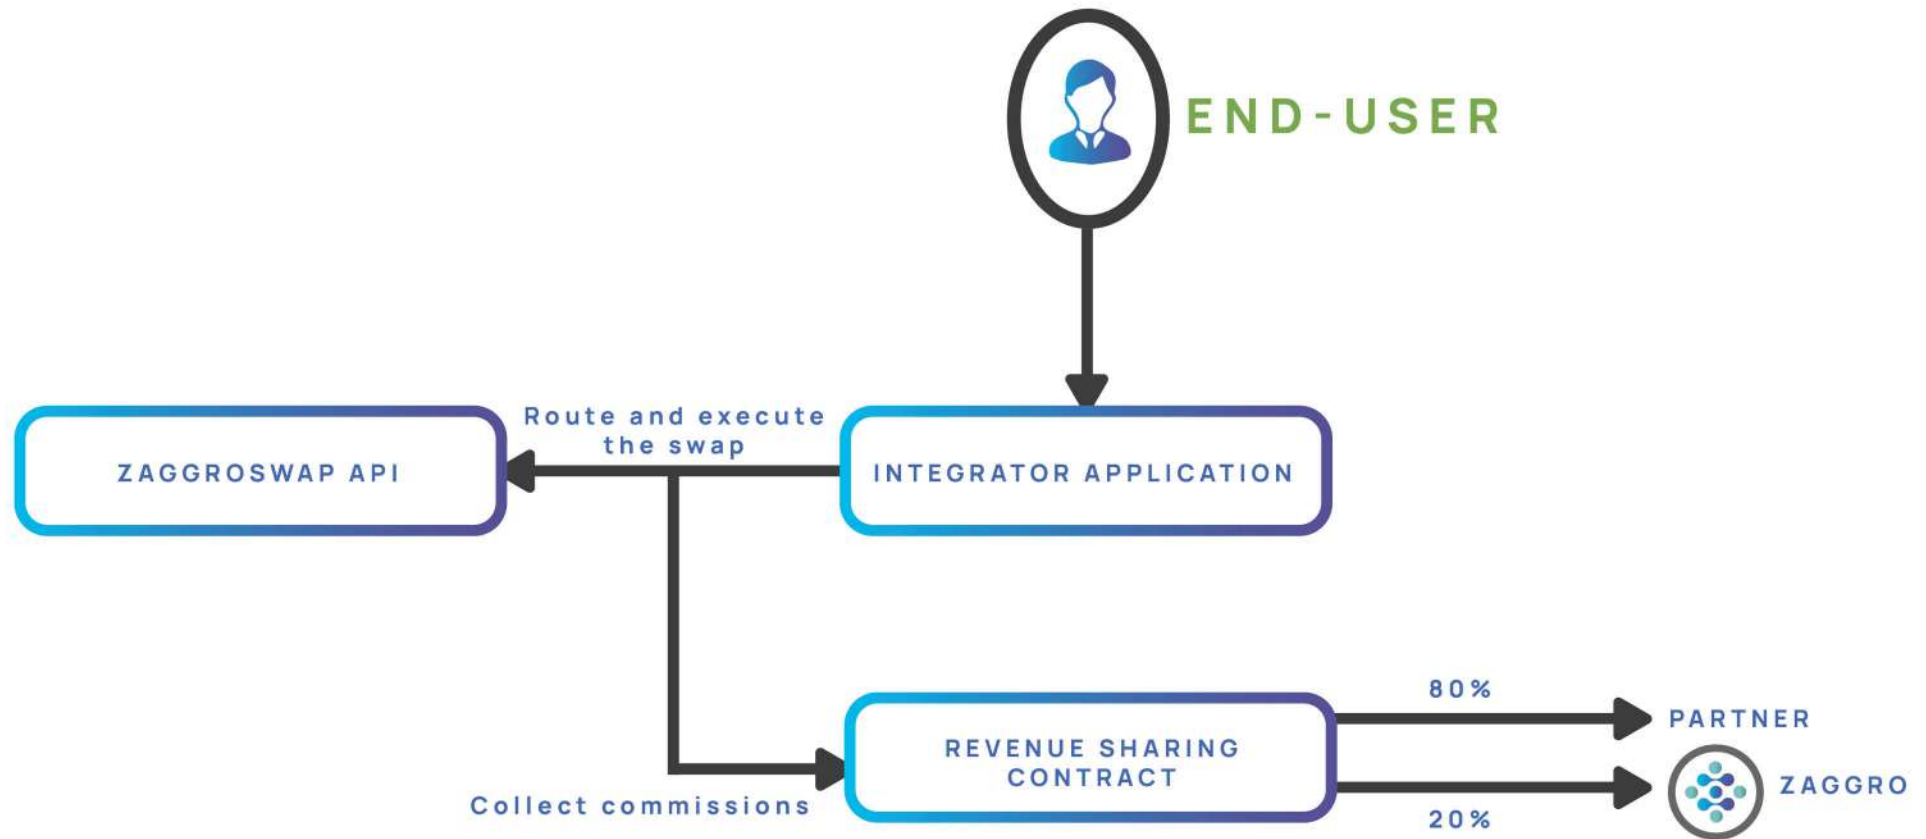

Revenue sharing

On-chain revenue share model with dApps that integrate the ZaggroSwap liquidity aggregator. An aggregator fee will be split between Zaggro (20%) and Partner (80%)

Revenue sharing model on ZaggroSwap

(When integrated into another dApp)

Token Utilities

Staking

Staking the ZAGGRO Token earns 10% APY

Voting

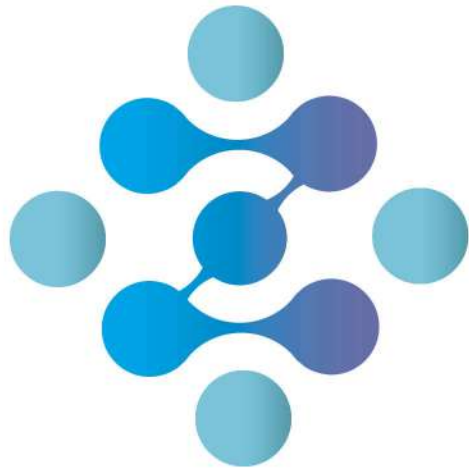

Each staked ZAGGRO Token equals 1 vote on DAO proposals.

DAO membership

Staking a minimum required amount of ZAGGRO Tokens allows DAO membership to approve proposals for ecosystem growth, ecosystem incentives, and budget for future ecosystem development.
